DAMIN SAHU

SOFTWARE DEVELOPMENT | FULL-STACK, AI & IoT PROJECTS

Jaipur, Rajasthan • 9302227322 • daminsahu697@gmail.com
GitHub: github.com/daminsahu697-debug • LinkedIn: linkedin.com/in/damin-sahu

PROFESSIONAL PROFILE

Computer Science and Engineering student focused on practical software development across web technologies, AI, and IoT. Interested in translating problem statements into functional prototypes, collaborating on technical projects, and applying programming and problem-solving skills to real-world challenges.

EDUCATION

B.Tech — Computer Science and Engineering **2025–2029**
NXTWAVE of Innovation in Advance Technology, Jaipur, Rajasthan
Current year: 2nd • CGPA: 9.33

Class XII — [Board / School name] **[Year]**
Percentage / Grade: [Enter your actual result]

Class X — [Board / School name] **[Year]**
Percentage / Grade: [Enter your actual result]

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript, SQL

Web Development: HTML, CSS, JavaScript, Node.js; React/Vite (confirm project stack)

AI, IoT & Platforms: OpenCV, TensorFlow, Firebase, Supabase, ESP32, Arduino IDE

Tools & Core Concepts: Git, GitHub, Data Structures & Algorithms, OOP, DBMS, Operating Systems

PROJECTS

SecureChain DMS | *MinIO, PostgreSQL, SHA-256, OCR/NLP*

Role: Document Security & Workflow Developer

- Designed the document-management workflow concept for storing legal and investigation documents in MinIO, with related metadata organized in PostgreSQL.
- Planned SHA-256 fingerprinting to support document-integrity checks and help detect unexpected changes to stored files.
- Outlined role-based access, audit logging, and approval-based editing so that the original document remains protected while requested changes are reviewed and tracked.

IoT Smart Waste Management System | *ESP32, Sensors, Firebase, Computer Vision*

Role: IoT & Computer Vision Developer

- Designed a prototype approach that uses ultrasonic sensors to estimate bin fill levels and support more timely waste collection.
- Planned the use of moisture and metal sensors alongside an ESP32/Arduino setup to support waste identification and sorting workflows.
- Outlined Firebase data flow and camera-based computer vision for waste identification and dashboard monitoring; retain only features that match the working prototype.

E-commerce Website | *React, JavaScript, Vite — verify stack*

Role: Frontend Developer

- Worked on a personal online-store interface, focusing on page structure, clear navigation, and presenting store content in a user-friendly layout.
- Organized the frontend into reusable interface sections and used a JavaScript-based development setup; confirm the technologies present in the final repository.
- Add only the features personally implemented—such as product cards, responsive styling, search/filtering, or cart interactions—before submitting the resume.

ACHIEVEMENTS & ACTIVITIES

First Prize — Badminton, NIAT sports event **2026**

UIDAI Hackathon — Team TatvX **2026**
Participated as a team member; add verified contribution or outcome if applicable.
